Guide to setting up a static IP on Windows 98

Step 1: Click on the Start menu then go to Settings and click Control Panel

Step 2: Double click Network icon

Windows 98 setup 1

Step 3: Click on the TCP/IP Ethernet Adaptor then click Properties

Step 4: You should now see the window below. Click on the **IP Address** tab at the top of the screen. Click on the round button next to where it says **'Specify an IP address'.** Enter the **IP address** you have been provided with (it should look something like 10.10.1.150). Below that enter the **Subnet Mask** that you were given.

Windows 98 setup 2

Step 5: Now click the 'Gateway' tab at the top of the window. Enter the Gateway number that you were given into the New Gateway box and then hit Add.

Step 6: Now click the **DNS Configuration tab** at the top of the window. Tick the round button next to where it says **'Enable DNS'**. In the **DNS Server Search Order** box enter the first **DNS** number you were provided with, then click **Add**. Now go ahead and enter the second **DNS** number you were given and click **Add**.

Step 7: Click **OK** to save and close this window. Close all open windows by pressing **OK**. Try your new connection by opening your web browser. If you cannot connect to the internet **go through the above instructions again before seeking assistance.**
